

Z Skin Repair Extra Intensive Cream is the top product in the Z Skin Repair series. It has helped many who have struggled for a long time with problem skin.

Z Skin Repair Extra Intensive Cream was developed in cooperation with dermatologists. It is the most nourishing product in the series. It differs from all the others in that it contains mineral oil, and not just vegetable oils. This is necessary for effective care of problem skin. The molecules in the oil are large enough that they lay like a protective film on the surface. This is especially important for people with skin that itches or cracks and needs a cream that is active over a long time. The film that is formed also serves to retain the skin's own moisture at the same time as it promotes healing.

Z Skin Repair Extra Intensive Cream also contains zinc, urea, hamamelis, A and E vitamins, and magnesium. All these ingredients are important for effective care of a variety of skin problems. The cream is made without parabens, dyes or perfumes.

Z Skin Repair Extra Intensive Cream comes in two sizes: 50 ml tube and 250 ml economy tube.
